

Abdulkadir Shaikh

Navsari, Gujarat — +91 7434043381 — contact@abdulkadir.in
Portfolio — GitHub — LinkedIn

Professional Summary

Backend-focused Software Engineer with experience building production-grade web and mobile applications using Node.js, Express, PostgreSQL, Flutter, and FastAPI. Experienced in designing scalable REST APIs, database systems, and full-stack products, with a strong interest in distributed systems, backend architecture, and high-performance software engineering.

Education

Uka Tarsadia University 2024 – 2028
Bachelor of Technology in Computer Science and Engineering CGPA: 8.4/10

Technical Skills

Languages: JavaScript, Python, Java, Dart, SQL
Frameworks: React, Node.js, Express.js, Flutter, FastAPI
Databases: PostgreSQL, MongoDB, SQLite, Hive
Developer Tools: Git, GitHub, Docker, Linux, Prisma ORM, Mongoose, Postman, Jest, Figma
Core Concepts: REST APIs, Authentication & Authorization, Database Design, API Design, System Design, Object-Oriented Programming, Data Structures & Algorithms

Experience

Backend Lead (Freelance) May 2026 – Present
MESMS — Multi-Tenant Retail ERP/POS Platform

- Architected backend for a multi-tenant ERP/POS platform (21 modules) with a 48+ table normalized PostgreSQL schema supporting tenant isolation and cross-module consistency.
- Built 123 REST APIs (Node.js, Express, Prisma) including an 11-step atomic bill-generation transaction spanning inventory, ledger, and tax calculation.
- Led backend for a 4-developer team, defining API contracts, auth workflows, and schema standards; reviewed all work before implementation.

Co-Founder & Full-Stack Developer Nov 2025 – Present
Neargrab

- Co-founded a hyperlocal commerce platform serving 1,000+ registered users across 10+ active merchants.
- Reduced merchant onboarding time by designing a streamlined registration flow, allowing merchants to complete onboarding in under 5 minutes.
- Optimized backend data access patterns and PostgreSQL queries, reducing redundant database operations and improving API response times by up to 80%.

Full-Stack Developer Intern Dec 2025 – Apr 2026
Bloomr.world (IIT Madras Incubated Startup)

- Delivered 2 product modules, independently building one end-to-end and collaborating on another.
- Contributed 20+ frontend and backend branches with a 75% first-review pull request approval rate.
- Redesigned 5+ core interfaces including the homepage, profiles, booking flow, and admin dashboard.

Selected Projects

PULSE GitHub
FastAPI • Flutter • Vue.js • YOLOv8 • OpenCV • WebSockets

- Created an AI-powered emergency traffic management platform consisting of two Flutter mobile applications and three web portals, enabling real-time coordination between ambulances, traffic authorities, and control centers.
- Real-time vehicle detection and traffic density analysis were implemented using YOLOv8, OpenCV, and WebSockets to support intelligent signal prioritization and live monitoring.
- Designed and implemented a research-driven route optimization engine based on the 2025 Breakthrough paper, accompanied by an interactive OpenStreetMap-based route visualizer supporting multiple pathfinding algorithms for comparative analysis.

Amaal Tracker Play Store
Flutter • Drogon (C++) • Elixir • Hive • PostgreSQL

- Built and launched a cross-platform Islamic productivity app with 1,000+ organic users, evolving it into a year-round companion for Salah, Qur'an, and habit tracking.
- Engineered an offline-first architecture with intelligent daily synchronization, gender-aware Salah workflows, and persistent Qur'an Khatm management.
- Developed a high-performance Drogon (C++) backend with an Elixir-based notification service for scalable APIs, real-time reminders, and administrative management.

Folder-Scaffold

npm — GitHub

Node.js • JavaScript • CLI • npm

- Engineered and published an open-source Node.js CLI on npm for automated installation of reusable AI agent skills.
- Architected a modular, zero-dependency system with automatic skill discovery and installation into proper directory.
- Automated project scaffolding by packaging reusable development workflows, with more than 270 installs per week.
- Designed an extensible plugin architecture supporting future technology-specific skills for Flutter, FastAPI, Node.js, and more.

Bits

Play Store

Flutter • Riverpod • Hive

- Designed and developed a local-first habit tracking application featuring a modern productivity-focused UI.
- Built reusable Flutter components using Riverpod for scalable state management.
- Implemented offline persistence, reminders, streak tracking, and milestone visualization.

Technical Writing

Hashnode

- Publish technical articles on Hashnode covering backend engineering, Flutter, software architecture, and development workflows.

Achievements

- Winner – College Shark Tank Competition
- Runner-up – College Ideathon Competition
